Square Foot Garden Planner

Use the chart below to plan out your urban container garden. If you don't have a yard, consider planting in a raised cedar bed, available at your local Ace Hardware!

1. Considering each square as 1'x1', outline the size of your garden to scale. A typical square foot garden would be 4 squares by 4 squares; that is to say, 4'x4', or 25 sq.ft.
2. Design your garden using the plant squares provided, arranging them in a grid to fill the garden outlined in Step 1.

*Don't forget to look at the back side of this sheet to ensure your plants are compatible!
